Data Entry Solutions

ADSI has custom developed our web app to be versatile. There are two options on how your patients are scheduled into our oximetry application.

1. Your office staff can input patient and physician data then "schedule" the patient to have an oximetry uploaded to their patient record.
2. Our office staff will handle this data entry at no cost to your company.
   Most Popular!

Most companies only allow you to have one option and they do not offer the other option. We let you decide how you want our oximetry application to work for you.

Informational Oximetry Results

Before our application, you may have had to use Profox, Nvision or similar software for patients that had monitoring or titration requests from their physicians. Our web app allows you to use the same system for both qualifying oximetry tests and what we call "Informational Oximetry Tests". All patient records are stored in our database so any patient can have one test for qualifying and another for Informational Results.

Results in Minutes

Why wait for hours for your oximetry report to be released? Our system is fast & efficient which allows our technicians to accurately and efficiently read the raw oximetry data for artifact and prepare you a pristine oximetry report.

Low Patient Cost

Our fees are some of the lowest in the country for oximetry testing. Our private pay rate for any patient is $28.00 nationwide. We accept & bill all Primary & Secondary insurances on behalf of the patient before any patient receives a bill.

Medicaid Testing

Most state Medicaid Plans do not cover this pulse oximetry test but require it prior to home oxygen can be ordered. Our company believes in helping patients that have financial hardships. If any patient has a financial hardship, oximetry testing will be waived as complimentary to the patient. We also offer a reduced rate for patients that have Medicaid in order to provide an affordable way to be tested for oxygen therapy.

Detailed Oximetry Reports

Our custom reports include great features that also include what Medicare Audits have been looking for;

- Timestamps for when the patient was scheduled into the web app, uploaded into the web app and when the technician edited the raw oximetry data.
- Type of pulse oximeter used and the serial number.
- DME/HME Courier & Physician Information
- Group 1 & Group 2 Qualification Guidelines
- Valid Oximetry Time with Excluded Artifacts
- Patient information including DOB, Insurance ID, Name & Gender
