

Sleep Better. Live Better.

With Obstructive Sleep Apnea (OSA) being one of the most undiagnosed sleep disorders today; roughly 40 million Americans suffer each year. Due to high co-pays or refusal of in-lab sleep testing patients continue to suffer. Now there is a way for patients to test in the comfort of their bed with **Home Sleep Testing**.

Be Aware... Get Tested... Get Treatment.

By combing the above three terms patients can reduce certain health risks associated with sleep apnea. In the diagrams below, it will discuss who should be evaluated and tested. Help your patients get the treatment they deserve through Home Sleep Testing today!

Patients at High Risk for OSA: *Who should be Evaluated for OSA?*

- | | |
